**Scalable architecture** to meet operator's growing needs

**Margin control** and reduced revenue leakage

**Detailed record information** to win more settlement disputes

**Ability to analyze** and optimize network routing

**Cloud/managed services model** for reduced TCO and CapEx

**Efficient** reference data management

# Redknee InBill

A convergent and complete wholesale billing solution that concurrently supports many business models and addresses multi-party settlement requirements

## Maximize the Value of your Work

The financial value of an operator's network is reliant on every event record being processed efficiently, accurately and cost-effectively.

The best way to assure this is through greater visibility. Capturing raw data as it travels through the network is the only way to guarantee full knowledge of every transaction – providing more accurate billing and better dispute resolution, as well as valuable marketing feedback.

## Redknee's Solution

Redknee InBill delivers an extensive level of detail on your network traffic and settlement issues, and can handle the most complex B2B agreements, be it voice, data or content. The solution has been developed to be the most accurate and cost-effective wholesale billing solution in today's market—a next generation settlement solution for interconnect, CABS, content/OTT/partner and MNO/MVNOs. Its scalable architecture supports rating and settlement for billions of events every day.

**Switch-to-bill traceability:** provides extensive mediation capability, allowing for the collection of raw switch data straight from the switches. This provides for unique switch to bill traceability that enables service providers to minimize revenue leakage.

**Rating:** provides a sophisticated rating engine that enables operators to apply business logic to determine traffic classifications and apply the correct rates - efficiently and accurately.

**Re-Rating:** supports event level re-rating to reflect retrospective changes to settlement terms and rates. The solution also provides a detailed and accurate audit trail for any re-rating activities.

**Quote**

“Redknee was selected for its low cost of ownership and its commitment to meeting a short deployment deadline. The proven performance of Redknee’s solution also means that we are assured that our investment in Redknee will meet Indosat’s growing scalability needs today and in the future”.

**Budi Irawan,**  
 Architecture and Strategy,  
 Indosat

**> Profitability and Reporting**

Redknee InBill delivers reports not only for business management, but to meet the regulatory requirements as well, with the added convenience of access through a web interface. Detailed event-level details can be accessed through flexible drill-down. The solution’s unique profitability engine provides the wholesale and retail view of a service provider’s business in an intuitive and meaningful way. Redknee InBill also provides user reporting, giving users the ability to develop their own reports. This gives service providers access to their data- anytime, anywhere, in detail.

InBill supports all network types, including:

Mobile (GSM, CDMA, AMPS)	NGN broadband services
Standard telephony (fixed)	Intelligent network services
VoIP	IP
2.5G/3G/LTE	OTT Services
Internet services	Data traffic
Transit traffic	GPRS/WAP
